

Setting up PDFCreator (4.0.3) for *Magic PDF Printer* Revit app

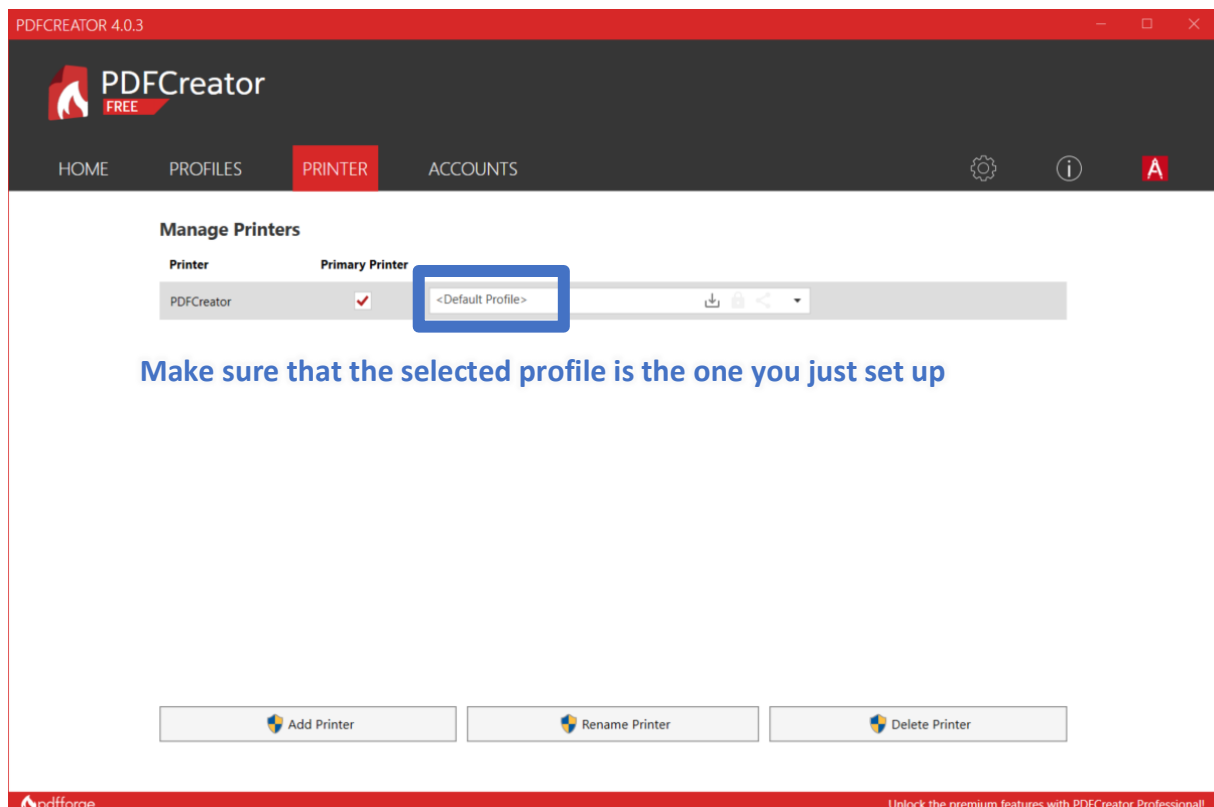

Download *PDFCreator Free* from : <https://www.pdfforge.org/pdfcreator>
Install it, open it, and set it up like explained below :

In « PROFILES » tab :

The screenshot shows the PDFCreator 4.0.3 interface in the 'PROFILES' tab. The 'Save' button is highlighted in the left sidebar. The main area is titled 'Save' and features a 'Choose « Automatic » mode' instruction. A blue box highlights the 'Automatic' radio button, which is selected. Below this, the 'Filename:' and 'Target Directory:' fields are highlighted with blue boxes. A blue arrow points to the right of these fields, with the text 'Click on the buttons on the right and choose the right tokens from the list'. At the bottom right, a green 'Save' button and a red 'Cancel' button are visible, with the text 'Don't forget to save!' above them. The footer includes the pdfforge logo and a note about premium features.

In « PRINTER » tab :

The screenshot shows the PDFCreator 4.0.3 interface in the 'PRINTER' tab. The 'Manage Printers' section is visible, with a table showing the 'PDFCreator' printer as the 'Primary Printer'. A blue box highlights the '<Default Profile>' dropdown menu. Below the table, there are three buttons: 'Add Printer', 'Rename Printer', and 'Delete Printer'. The footer includes the pdfforge logo and a note about premium features.
